SilkRoadCoin (SRC) – Official Listing Document

Client: Achaemion Holding FZE Network: Binance Smart Chain (BEP-20)

Token Overview

Token Name: SilkRoadCoin (SRC) Total Supply: 250,000,000 SRC (18 decimals)
Contract Address: `0xfB0F9690114Ff06d898cDD86fBA1b49354b6cbb2`
License: MIT Verification Date: June 12, 2025

Detailed Technical Specifications:

Parameter	Value
Standard	BEP-20
Decimals	18
Initial Liquidity Pool (LPs)	To be determined at listing
Auditing Status	Pending (Expected completion Q4 2025)
Security Model	Ownership renounced after initial deployment and burning steps, or locked via multi-signature wallet (specifics confirmed post-burn execution).

Tokenomics Summary and Distribution Model

The total fixed supply of SilkRoadCoin is 250,000,000 SRC. The tokenomics are structured to incentivize long-term holding, fund ecosystem development, and manage deflation through controlled burns.

Total Supply: 250,000,000 SRC

Transaction Taxes (Buy/Sell Surcharges):

Transaction Type	Tax Rate	Allocation Focus
Buy Tax	5%	Liquidity Provision (3%), Marketing/Development (2%)
Sell Tax	10%	Liquidity Provision (5%), Marketing/Development (3%), Reflection/Rewards (2%)

Key Wallet Addresses:

Wallet Role	Address	Purpose
Owner Wallet	0xb73997C19722aCe8FA3b4178301D1828Bc89E9E9	Initial deployment, contract ownership (temporary or multi-sig managed).
Tax Wallet	0xF9A8Bb84ef445b9499bB0a4E088A321F54B621F9	Designated address receiving pooled tax revenues for designated activities.

Deflationary Mechanisms (Token Burns):

The project includes two mandatory, pre-scheduled token burn stages executed via specific smart contract functions, significantly reducing circulating supply and increasing scarcity.

1. Burn Stage One:

    ◦ Amount: 10% of Total Supply
    ◦ SRC Burned: $0.10 \times 250,000,000 = 25,000,000 \text{ SRC}$
    ◦ Execution Trigger: Upon successful completion of initial exchange/ DEX launch metrics.

2. Burn Stage Two:

- Amount: 5% of Total Supply
- SRC Burned: $0.05 \times 250,000,000 = 12,500,000 \text{ SRC}$
- Execution Trigger: Post-initial 6 months of trading, contingent upon SmartMarket platform milestone achievement.

Burn Execution Methodology: Burns are executed through irreversible smart contract calls (`burnStageOne()` and `burnStageTwo()`). These functions transfer the specified tokens to the null address (`0x0000000000000000000000000000000000000000`), permanently removing them from circulation.

Illustrative Supply Reduction:

$$\text{Initial Supply} - (\text{Burn Stage One} + \text{Burn Stage Two}) = \text{Final Circulating Supply I}$$

$$250,000,000 - (25,000,000 + 12,500,000) = 212,500,000 \text{ SRC (Post-Burn)}$$

Financial & Branding Information

Token Price (Initial Listing): 0.00 USD (Determined by the initial liquidity pool size and pricing mechanism established on the primary DEX platform).

Branding Assets:

- Token Logo: A premium, high-resolution image reflecting the black-and-gold motif:
  - URL: https://ryotaopgmifzbehjtxbg.supabase.co/storage/v1/object/public/smartmarket_logo/src.png
- Whitepaper (Technical & Vision Document): Comprehensive documentation detailing the technology, roadmap, and business model.
  - URL: https://gapgpt.app/api/v1/canvas_pdf/dd33ab20-f671-4fa6-8b4c-39f80de0de4d.pdf

Exchange Listing Agreement Details

Date of Planned Listing: November 24, 2025 (Subject to exchange readiness and final due diligence clearances).

Client Legal Entity: Achaemion Holding FZE

Primary Contact Information for Exchange Operations:

- Contact Name: [To be filled based on CEX request]
- Email: ceo@src.achaemion.com
- Contact Number: +90 533 883 3294 (International Operations Line)

Official Registered Address: Achaemion Holding FZE, Dubai Internet City, United Arab Emirates

International Operational Footprint: The operational structure extends through key regulatory hubs: Mauritius (Holding/Finance), Türkiye (Development/Compliance), and Cyprus (European Market Liaison). This diversification underpins the project's global reach strategy.

Project Description: SilkRoadCoin and the SmartMarket Ecosystem

SilkRoadCoin (SRC) is positioned not merely as a cryptocurrency, but as the foundational utility token underpinning the entire Achaemion Holding FZE digital

economy. Built securely on the high-throughput, low-fee Binance Smart Chain (BEP-20), SRC aims to resurrect the principles of secure, high-value, trust-based commerce reminiscent of the historical Silk Road, modernized through decentralized finance (DeFi) architecture.

The SmartMarket Framework

SRC serves as the core medium of exchange within the SmartMarket ecosystem. This framework is designed for the trade of exclusive, luxury-grade digital and physical assets (tokenized real-world assets, high-value digital collectibles, and premium services).

Key Features Powered by SRC:

1. Transaction Transparency: All trades executed via SmartMarket are settled using SRC, ensuring immutable, verifiable records on the BSC ledger.
2. Supply Control Mechanisms: The platform utilizes SRC to manage tiered access and fractional ownership of high-value assets, often involving automated smart contract escrow services.
3. Integrated DeFi Architecture: SRC holders gain preferential access to integrated yield farming opportunities, staking pools, and collateralized lending services built directly into the Achaemion financial layer.

Branding and User Experience

The project adopts an ultra-luxury black-and-gold identity. This aesthetic is consistently applied across all client touchpoints, including the official web portal: https://src.achaemion.com. This commitment to premium design reflects the high-value nature of the assets SRC is intended to transact.

Strategic Role of SRC

SRC is the backbone of Achaemion's multi-asset infrastructure. Its utility extends to: * Liquidity Incentivization: Providing rewards for LPs stabilizing the SRC market. * Commerce Utilities: Paying for platform services, listing fees for high-tier merchants, and accessing exclusive content vaults. * Cross-Border

Integrations: Future utility involves bridging SRC liquidity into cross-border fiat settlement layers through Achaemion's institutional partners.

Compliance and Governance Statement

Achaemion Holding FZE confirms that the deployment and management of the SilkRoadCoin contract adhere to relevant international guidelines regarding digital asset issuance, specifically focusing on transparency regarding supply, taxation, and ownership controls outlined within this document.

The licensing agreement for the underlying technology stack falls under the MIT License, promoting open use and auditability of the associated open-source components where applicable.

Commitment to Token Holders: The staged token burns are a non-negotiable commitment designed to reward early adoption and counter potential inflationary pressures by dynamically reducing supply in response to project milestones.
